

**Important Instructions to examiners:**

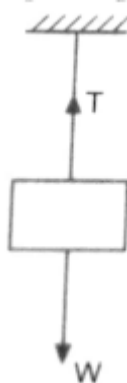

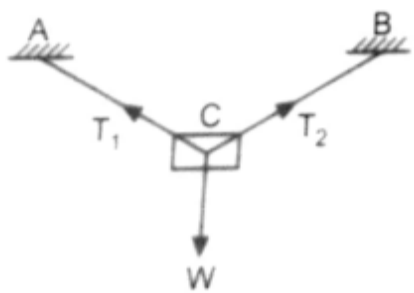

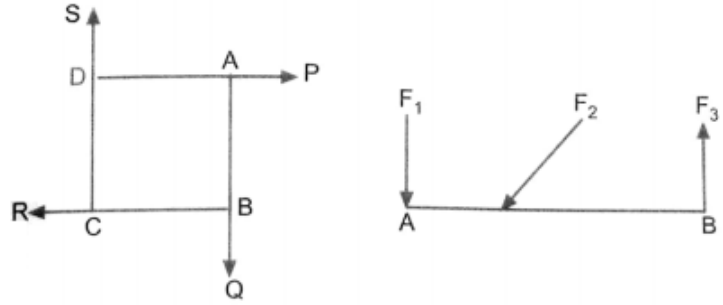

- 1) The answers should be examined by key words and not as word-to-word as given in the model answer scheme.
- 2) The model answer and the answer written by candidate may vary but the examiner may try to assess the understanding level of the candidate.
- 3) The language errors such as grammatical, spelling errors should not be given more importance. (Not applicable for subject English and Communication Skills.)
- 4) While assessing figures, examiner may give credit for principal components indicated in the figure. The figures drawn by the candidate and those in the model answer may vary. The examiner may give credit for any equivalent figure drawn.
- 5) Credits may be given step wise for numerical problems. In some cases, the assumed constant values may vary and there may be some difference in the candidate's answers and the model answer.
- 6) In case of some questions credit may be given by judgment on part of examiner of relevant answer based on candidate's understanding.
- 7) For programming language papers, credit may be given to any other program based on equivalent concept.

Q. 1	c)	<b>State Law of polygon of forces.</b>	1	
	Ans.	This law states that, "If number of coplanar concurrent forces acting simultaneously on a body, be represented in magnitude and direction by the sides of polygon taken in same order, then their resultant may be represented in magnitude and direction by the closing side of the polygon, taken in opposite order."		
		<p>(a) Space diagram</p> <p>(b) Vector diagram</p>	1	2
	d)	<b>Define free body diagram.</b>	2	2
	Ans.	When all active and reactive forces acting on the free body are shown and thus the diagram obtained is called as 'free body diagram'.		
	e)	<b>State four laws of static friction.</b>	<ol style="list-style-type: none"> <li>The frictional force is always acts tangential to the plane of contact and in the opposite direction of motion.</li> <li>When the body is in limiting equilibrium, the ratio of limiting friction to normal reaction is constant. This ratio is called as 'coefficient of friction'.</li> <li>The coefficient of friction depends upon the nature of surfaces in contact and is not dependent on surface areas in contact.</li> <li>The static friction is more than dynamic friction.</li> <li>Force of friction is a self-adjusting force and it increases as the applied force increases up to limiting friction.</li> </ol>	1/2
Ans.		each		
f)	<b>State the centroid of semi-circle and show it on the sketch.</b>	1/2		
Ans.	Centroid of semi-circle :	1/2		
	$\bar{X} = R$ $\bar{Y} = \frac{4R}{3\pi} \text{ (from base AB)}$	1

Q. 6	c)	<p>Locate the center of gravity for the solid as shown in Figure No. 9.</p> <p style="text-align: center;"><b>Fig. No. 9</b></p>		
	Ans.	<p>Let, Fig. 1 = Cylinder and Fig. 2 = Sphere.</p> <p>1) Volume calculations</p> <p><math>V_1 = \text{Volume of Cylinder}</math></p> $= \pi R^2 h = \pi (150)^2 \times 400$ $= 28.274 \times 10^6 \text{ mm}^3$ <p><math>V_2 = \text{Volume of Sphere}</math></p> $= \frac{4}{3} \pi R^3 = \frac{4}{3} \pi (100)^3 = 4.188 \times 10^6 \text{ mm}^3$ <p><math>V = V_1 + V_2 = 28.274 \times 10^6 + 4.188 \times 10^6 = 32.462 \times 10^6 \text{ mm}^3</math></p> <p>2) <math>\bar{X}</math> calculation</p> <p>As the given composite solid is symmetric about Y-Y axis, CG lies on the axis of symmetry.</p> $\bar{X} = \frac{D}{2} = \frac{300}{2} = 150 \text{ mm}$ <p>(3) <math>\bar{Y}</math> calculation</p> $y_1 = \frac{h}{2} = \frac{400}{2} = 200 \text{ mm}$ $y_2 = 400 + \text{radius of sphere} = 400 + 100 = 500 \text{ mm}$ $\bar{Y} = \frac{V_1 y_1 + V_2 y_2}{V} = \frac{(28.274 \times 10^6 \times 200) + (4.188 \times 10^6 \times 500)}{32.462 \times 10^6}$ $\bar{Y} = 238.703 \text{ mm}$	1
